

Introduction

The Houston Independent School District (HISD) has compiled information covering a broad range of topics relating to the education of students in the district. The *HISD Digest of Education Statistics* includes information on HISD students, staff members, and financial issues, as well as comparative data with other Texas school districts. Data for this Digest were collected from a number of sources, including the HISD School Administrative Student Information (SASI) system, the Texas Education Agency's (TEA) website (<http://www.tea.state.tx.us/>), the TEA Public Education Information Management System (PEIMS), the Texas Assessment of Academic Skills (TAAS), the Human Resources database, the Harcourt Brace data tapes, and Educational Testing Service data tapes.

The Digest is divided into nine chapters: Houston Independent School District Academic Infrastructure;

Enrollment; Teachers and Other Instructional Staff; Dropouts, Graduates, and Advanced Seals on Transcripts; Educational Achievement; Student Behavior; Program Information; Revenues and Expenditures; and Harris County and Major Urban School Districts. In most cases, the data presented are for the 1990–91 through the 2001-02 school years. When available, data are presented as far back as the 1968–69 school year.

The purpose of this document is to provide the Superintendent of Schools, Board members, senior staff, program administrators, and other interested parties with longitudinal data addressing numerous facets of HISD. The tables provide a unique opportunity to view district performance over several years. Information gathered from the trends evidenced here can be used to modify and create policy and programs that will continue to enhance the education that students receive in HISD.

CHAPTER 1

HISD Academic Infrastructure

This chapter provides an overview of the structure of the Houston Independent School District (HISD) and the academic programs it offers. The figures presented here detail the administrative structure of the district and the structure of the educational system.

Recognizing the need to decentralize the decision-making process in order to better serve the district's 286 schools and programs, the HISD Board of Education began the first phase of its decentralization efforts in December 1994. In 2001, additional changes were made, allowing for the direct reporting of the Chief of Staff, Chief officers, and other senior staff to the Superintendent of Schools. The administrative organization for HISD as of the 2001-02 school year is depicted in Figure 1.1.

Schools in HISD are organized under a system of management units which consists of vertical teams of schools where the majority of students within a specific geographic area are channeled from elementary school to middle school and on to high school and district offices. Each functions as a semi-autonomous school district headed by a district superintendent. The district superintendents of the 11 district offices and the Alternative Schools District plus the Project Manager of the Acres Homes Coalition report directly to the Deputy

Superintendent, School Administration. The district offices represent between 16 and 32 schools organized within one to three vertical teams, thereby ensuring appropriate programs, services, and management for schools within each unit and offering more opportunities to tailor resources to meet individual school needs. Alternative schools and programs all remain under a separate management unit, the Alternative District. The Acres Homes Coalition is also organized under a separate management unit.

Figure 1.2 shows the educational structure of HISD. The district offers educational opportunities from early childhood through 12th grade. Of the 182 elementary schools, several have three- and four-year old pre-kindergarten programs. Most of the elementary schools serve students through the fifth grade with some serving sixth graders as well. The district's 33 middle schools typically serve sixth through eighth grade students. HISD has 30 four-year high schools.

In addition to the regular elementary, middle, and high schools, HISD offers students specialized instructional opportunities at its 41 other schools. These schools are charter schools, community-based educational programs, and combined-level/other schools.

Figure 1.1—Administrative organizational structure: 2001–02

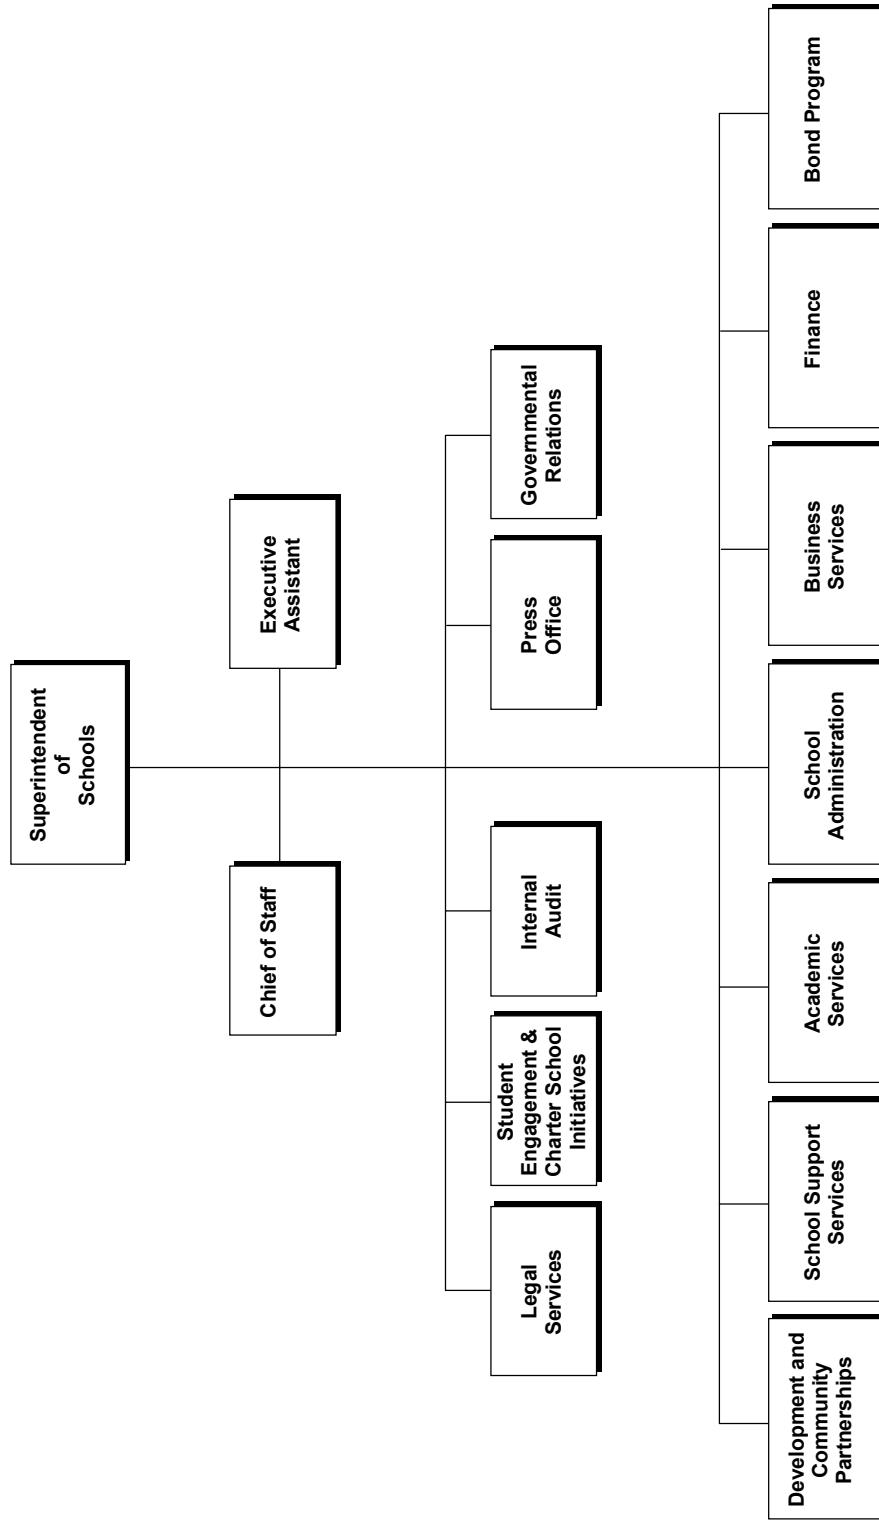

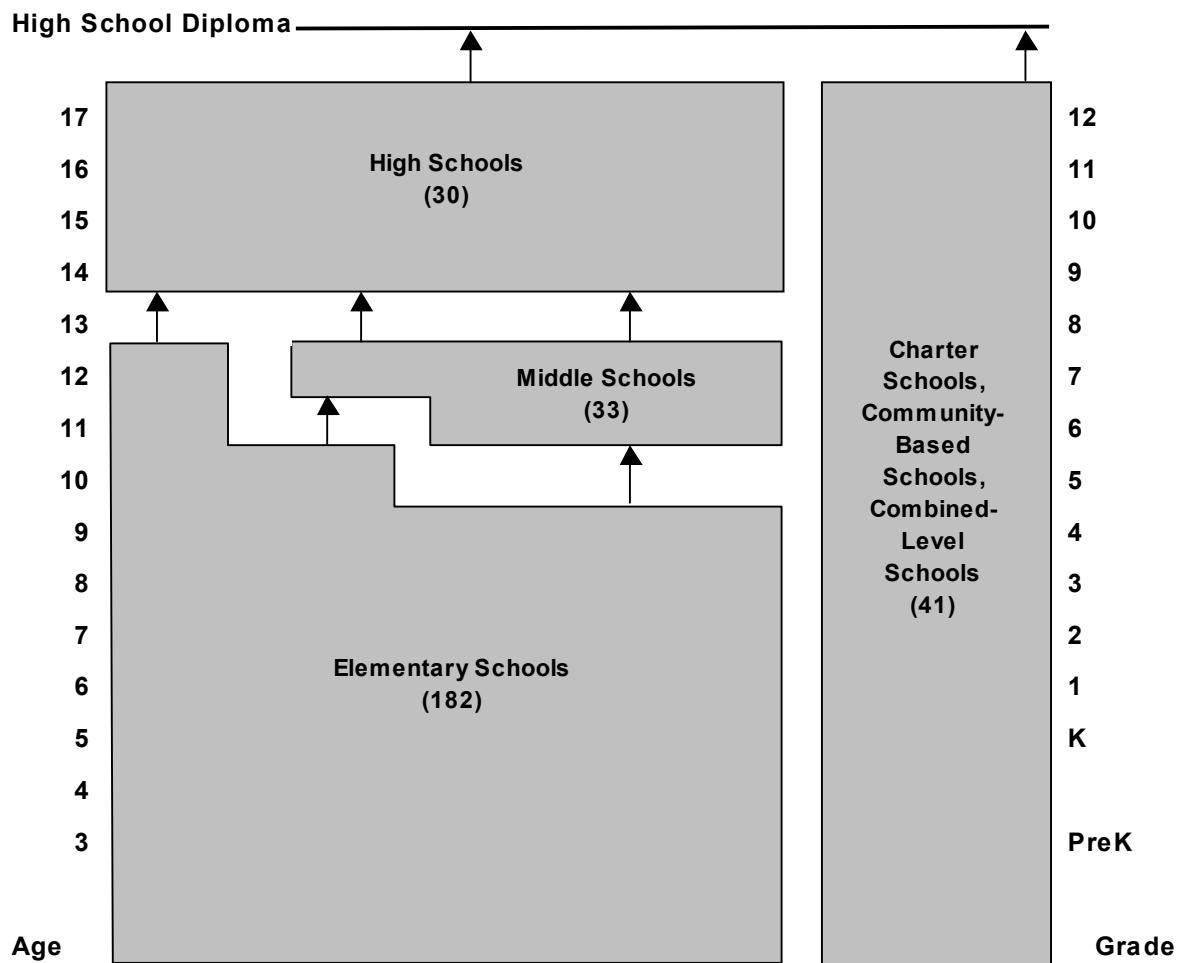

Figure 1.2—HISD educational structure: 2001-02

Note: In accordance with Federal Law, Special Education programs serve students ages 3 to 22.

CHAPTER 2

Enrollment

This chapter contains a variety of statistics concerning enrollment in the Houston Independent School District (HISD). Enrollment variables include ethnicity, gender, grade level, socioeconomic status, attendance, promotion, placement, retention, mobility, and other demographic data. Data are also reported for enrollment in such programs as Title I (formerly Chapter 1) and Career and Technology Education. In addition, totals for students classified as at-risk of dropping out of school, special education students, Limited English Proficient (LEP) students, plus the number of foreign-born students and the home language of LEP students are reported.

Whenever possible, official data are taken from the Texas Education Agency's (TEA) Academic Excellence Indicator System (AEIS). The TEA collects information from each district in the state, and uses the Public Education Information Management System (PEIMS) to analyze and report the information. Districts use the information for state and federal funding purposes, program planning, public relations, and other purposes. HISD's *District and School Profiles* or the district's computerized School Administration Student Information (SASI) system provide district data that is not reported in official TEA publications.

Enrollment by Ethnicity, Economic Status, and Gender

Total student enrollment by ethnicity is described in Table 2.1. In 1968–69, total enrollment in HISD was 244,742. Overall, the 1968–69 enrollment decreased until it reached 187,031 in 1984–85. Enrollment then increased to its current enrollment of 210,670 for the 2001–02 school year.

Enrollment by ethnicity shifted completely from 1968–69 to 1999–2000. The largest group of students throughout specific years was White students from 1968–69 to 1972–73, then African American students from 1973–74 to 1988–89, and then Hispanic students from 1989–90 to 2001–02. In 1968–69, the total enrollment of White students was 131,032; however, that number decreased every year, reaching 20,062 in 2001–02. Conversely, the Hispanic student enrollment was 30,724 in 1968–69, and has increased steadily every year reaching 118,200 in 2001–02. The African American student enrollment has fluctuated throughout

the years with a 1968–69 enrollment of 81,759; then increased to 91,157 in 1977–78; and then fell to their lowest enrollment of 65,951 in 2001–02.

As of the 2001–02 school year, the Hispanic students were the largest group enrolled. Hispanic enrollment consisted of 56% of the total student enrollment. African American students represented 31%; White students represented 10%; Asian/Pacific Islander students represented 3%; and Native American students represented less than 1% of the total student enrollment.

Although Native American students were always in the minority, from 1968–69 to 2000–01 their number decreased from 200 to 116, and increased slightly in 2001–02 to 121. The number of Asian/Pacific Islander students increased from 1,027 in 1968–69 to 6,336 in 2001–02. The Asian/Pacific Islander population had the highest enrollment increase of over six times greater, while the Hispanic enrollment increased nearly four times. At the same time, White enrollment in HISD decreased 85%; Native American enrollment decreased 40%; and African American enrollment decreased 20%.

Table 2.2 indicates that the number of economically disadvantaged students in HISD increased from 100,445 in 1990–91 to 166,429 in 2001–02. This represented a 66% increase over the twelve year period. When compared to the total enrollment, over 50% of the total student population was economically disadvantaged each year of the ten year period. In 2001–02, over 79% of the total student enrollment was economically disadvantaged.

Enrollment figures reported in HISD's *District and School Profiles* also indicate that males slightly outnumbered females from 1992–93 to 2001–02. Females represent 49% of the total enrollment, while males represent 51% of the total enrollment in 1992–93 and in 2001–02. For the 1990–91 and 1991–92 school years, the number of male and female students were not reported by the *District and School Profiles*.

Table 2.3 lists HISD enrollment by grade level from 1993–94 to 2001–02. Over the nine years, enrollment was highest in grade one and grade nine, except in 1998–99 when grades one and two had the highest enrollment.

Student Attendance, Promotion, Retention, Placement, and Mobility

As shown in Table 2.4, districtwide student attendance rates have fluctuated very little from 94.0% in 1990–91 to 94.6% in 2000–01. Table 2.5 indicates that from 1991–92 to 2000–01, promotion rates varied from 82.2% to 94.3%. From 1991–92 to 1993–94, retention rates declined from 7.6% to 5.2%, then reached 6.0% in 1995–96. After the 1995–96 school year, retention rates were not reported by TEA for the district as a whole but by individual grade levels.

The number of students placed in the next grade level increased from 10.2% in 1991–92 to 12.2% in 1993–94, then dropped to 3.7% in 1995–96. After the 1995–96 school year, students placed in the next grade were not reported by TEA.

Student mobility rates are recorded in Table 2.6. Between 1990–91 and 1992–93, mobility rates were calculated by HISD, reflecting movement into, out of, and within the school district. During this time, the rate increased from 34.0% in 1990–91 to 38.2% in 1992–93. Starting with the 1993–94 school year, mobility rates were calculated by TEA based on school membership reflecting less than 30 weeks. The mobility rate dropped from 24.3 in 1999–2000 to 23.4 in 2000–01.

Enrollment by Student Groups

Table 2.7 lists the percent of overage, at-risk, and special education students in HISD. The number of overage and at-risk students was not reported in the HISD *District and School Profiles* before the 1992–93 school year. The number of overage students in HISD fell each year from 24.9% in 1992–93 to 5.0% in 1997–98. In 1998–99, the number of students rose to 6.1%, fell in 1999–2000 to 5.2% and rose again in 2000–01 to 6.4%. The number of at-risk students fluctuated from 57.5% in 1992–93 to 43.2% in 1996–97, and then to 58.5% in 2001–02. Participation in Special Education programs increased from 9.0% in 1987–88 to 10.5% in 1998–99 and fell to 9.8% in 2001–02.

Tables 2.8 and 2.9 list enrollment in Title I and Career and Technology programs from 1990–91 through

2001–02. The number of students enrolled in Title I programs increased from 54,721 in 1990–91 to 125,576 in 2001–02. Sixty percent of the 2001–02 total enrollment are Title I students. Table 2.9 shows that enrollment in Career and Technology programs increased from 19,355 in 1990–91 to 36,202 in 2001–02. Of the total student enrollment for the 2001–02 school year, 17% are enrolled in the Career and Technology program.

Foreign Language Student Groups

The number and percent of Limited English Proficient (LEP), Bilingual Education, and English as a Second Language (ESL) students are presented in Table 2.10. The number of LEP students fluctuated before the 1989–90 school year, then increased in successive years. The LEP enrollment was at its highest in 2001–02 with 59,904 students. The number of students participating in Bilingual Education programs fluctuated until the 1988–89 school year. Except in 1998–99, this number then increased every year reaching 37,378 in 2001–02. While Bilingual Education enrollment increased, the number of students enrolled in ESL decreased. Participation in ESL programs fluctuated from 17,922 in 1985–86 to 16,697 in 2001–02.

The countries of origin of HISD LEP students, who are also referred to as foreign-born students, are listed in Table 2.11. Figures are based on self-report. While many of the numbers have fluctuated since 1994–95, the majority of LEP students report their country of origin as Mexico, from 14,556 in 2000–01 and 14,814 in 2001–02. Besides "other countries," El Salvador was next with 1,206 students in 2000–01, followed by Honduras with 1,362 students in 2001–02.

Tables 2.12 displays data regarding the home languages of HISD LEP students between 1985–86 and 2001–02. The vast majority of LEP students in 2001–02 indicated Spanish as their home language, comprising 56,585 students, or 98%, out of 57,708 students. The second largest home language group reported in 2001–02, was Arabic, with 259 students.

Table 2.1—Student enrollment by ethnicity: 1968–69 to 2001–02

Year*	African American	Hispanic	White	Native American	Asian/Pacific Islander	Total Enrollment
1	2	3	4	5	6	7

Teachers and Other Instructional Staff

The following chapter covers various instructional and support staff data throughout HISD. For most of the tables, data are presented annually for the past ten years. Some of the variables include the number of staff members in teaching and other educational positions, staff salaries, gender, ethnicity, and years of experience.

Teacher Demographics

The total number of Full-Time Equivalent (FTE) teaching positions fluctuated from 10,696 in 1990–91 to 12,097 in 2001–02, as listed in Table 3.1. Additionally, the number of total professional staff rose from 12,848 in 1990–91 to 24,601 in 2001–02. There was a slight increase in the number of professional support and campus administration staff positions from 1990–91 to 2001–02. However, there was a substantial decrease of more than 50% in the number of central administration positions. In 1990–91, the number was 265 and in 2001–02 the number increased to 288. These changes in the professional staff were reflective of efforts by the district to decentralize. The greatest increase across all staff positions was in the number of FTE educational aides from 1,265 in 1990–91 to 2425.7 in 2001–02.

Table 3.2 presents a wide variety of staff demographic data. From 1992–93 to 2001–02, when the gender was reported by TEA, at least 76% of teachers were female. During the 2001–02 school year, 41% of all teachers were African American, 39% were White, 18% were Hispanic, and 2% were from other ethnic backgrounds. The 1998–99 school year was the first year the district had more African American teachers than White teachers.

As of 2001–02, 70% of all teachers held a bachelor's degree, 28% held a master's degree, while 2% held a doctorate degree. Although there has been little fluctuation in the percentages of teachers with a degree over the last ten years, there has been an increase in the number of teachers with no degree since the 1993–94 school year.

Based on populations served in 2001–02, 58% of teachers provided instruction in regular education classes, 11% in Special Education, 1% in Compensatory Education, 3% in Career and Technology, 19% in Bilingual/ESL, 6% in Gifted and Talented, and 2% in other programs. In the 1990–91 school year, the percentage of teachers instructing in regular education were 58%, 11% in Special Education, 5% in Compensa-

tory Education, 34% in Career and Technology, 15% in Bilingual/ESL, 4% in Gifted and Talented, and 3% in other programs.

HISD teachers had an average of 12 years total teaching experience during the 2001–02 school year. In 1990–91, the average number of years of experience was 11 years. The average number of years of experience with the district, 10 years, has remained stable throughout the last twelve years. At the same time, the teacher turnover rates increased from 13% in 1990–91 to 15% in 2001–02.

Of the teaching permits, there were 495 teachers with emergency teaching permits in 2001–02. In 1995–96, there were seven emergency teaching permits in the school district, as shown in Table 3.2.

Student/Teacher Ratios

The student/teacher ratio listed in Table 3.3 has remained fairly stable across the last ten years. In 2001–02, there was an average of 17.4 students per teacher in the district.

The average class size of all the elementary grades in 1990–91 was 22.3; while each individual grade was reported by TEA for the 2001–02 school year. In 2001–02, kindergarten had an average class size of 21.2; while the sixth grade had an average class size of 25.9. All of the secondary classes increased in size by at least 4 students per class between 1990–91 and 2001–02.

Staff Salaries

With a slight increase in the average years of experience among teachers in the district, there has also been an increase in average teacher salaries, as shown in Table 3.4. The average actual teacher salary in 2001–02 was \$42,057, a 50% increase from 1990–91. A portion of this increase can be attributed to salary increases for all teachers, regardless of the number of years of teaching experience. For example, the starting salary for beginning teachers increased from \$22,048 in 1990–91 to \$32,131 in 2001–02. Average actual staff salaries also decreased from 1990–91 to 2001–02 for professional support staff (\$34,342 to \$27,022), increased for campus administration (\$46,034 to \$67,680) and increased for central administration staff (\$50,670 to \$67,866).

The average actual salaries for teachers increased \$14,036 over the past twelve years, averaging \$1,170 per year. Average actual salaries decreased \$7,320 for professional

professional support (\$610 annually); increased \$21,646 for campus administration (\$1,803 annually); and in-

creased \$17,196 for central administration (\$1,433 per year), over the same twelve years.

CHAPTER 4

Dropouts, Graduates, and Advanced Seals on Transcripts

Dropout Rates

Table 4.1 presents the districtwide dropout rates by ethnicity, gender, and socioeconomic status from 1990–91 through 2000–01. Annual dropout rates were calculated by dividing the number of dropouts by the annual enrollment for grades 7 through 12. For the 1990–91 and 1991–92 school years, dropout rates were calculated using the annual enrollment records from the PEIMS Fall Enrollment for the preceding school year. In an effort to improve the accuracy of dropout estimates, TEA revised the dropout calculation rules for the 1992–93 and subsequent school years to use cumulative enrollment. Therefore, dropout rates from 1992–93 through 2000–01 are not comparable with those from 1990–91 and 1991–92.

The overall dropout rate for the district was 6.3% in 1992–93 compared to 1.5% in 2000–01, representing a decrease of 4.8 percentage points. When comparing the 1992–93 and 2000–01 dropout rates for the different ethnic groups, decreases occurred for African American, Hispanic, and White students (4.8, 5.8, and 2.8 percentage points, respectively). During this timeframe, Hispanic students experienced the largest decline in dropout rates. When examining gender, the dropout rate for males and females decreased by 5.4 percentage points and 4.3 percentage points, respectively, when comparing 1992–93 to 2000–01. The smallest decreases in the dropout rate occurred for students identified as economically disadvantaged (0.9 percentage points) when comparing 1992–93 to 2000–01.

Graduates, Advanced Seals and Recommended High School Program

Table 4.2 presents graduation data for the total district, by ethnicity, special education status, and type of degree. For the graduation classes of 1991 and 1992, graduation data were reported by a percent, or rate of graduation; but beginning with the graduates in 1993, graduation data have been reported by number. The number of graduates increased from 6,343 for the Class of 1993 to 7,632 for the Class of 2001. During this interval, the highest number of graduates occurred for the Class of 2000 with 7,735. When comparing the number of graduates for the Class of 1993 to the Class of 2001 by ethnic group, the number of African American and Hispanic students increased. However, the per-

centage of African American and White students who graduated declined when comparing the Class of 1993 to 2001 (36.6% to 34.2% and 21.3% to 15.4%, respectively); alternatively, the percentage of Hispanic students who graduated increased from 36.7% for the Class of 1993 to 45.6% for the Class of 2001. For special education graduates, the number increased from 430 for the Class of 1993 to 687 for the Class of 2001.

To receive an advanced seal, students completed a more rigorous and prescribed set of courses than those required for the regular or minimum high school program. Students entering ninth grade in 1995–96 or before were eligible to graduate with an advanced seal on their transcript. However, reflecting TEA's revised classification of graduates, the district began phasing out the advanced seal and replacing it with the Recommended High School Program/Distinguished Achievement Program transcript seal for students entering ninth grade in 1996–97. As a result of the gradual change, students entering ninth grade in 1994–95 or 1995–96 were eligible to graduate either with an advanced seal or with the Recommended/Distinguished transcript seal. As a result of these changes, interpretation of these data from a longitudinal perspective is limited. The number of students graduating with an advanced seal on their transcript declined from 2,720 for the Class of 1993 to 1,864 for the Class of 1996. Over the next two years of graduating classes, this number rose to 2,399 for the Class of 1998. For the Class of 1999 and 2000, the number of graduating students with an advanced seal was 245 and 3, reflecting the changes that had been instituted.

As the number of students earning an advanced seal decreased, the number graduating under the Recommended/Distinguished program increased. Beginning with the Class of 1998, the number of students graduating under the Recommended High School Program were included with those students graduating under the Distinguished Achievement Program as reported by TEA. This indicator reports the number of graduates who were reported as having satisfied the course requirements for the Texas State Board of Education Recommended High School Program or Distinguished Achievement Program. As a result of the reporting changes that were being implemented, interpretation of these data from a longitudinal perspective is limited. For students graduating in the Class of 1998, there were 15 who graduated in this program. However, for the Class of 1999, this number increased to 1,814

students. For the Class of 2001, the number of students graduating under the Recommended High School Pro-

gram or under the Distinguished Achievement Program was 4,476, which reflects full implementation of the policy changes.

CHAPTER 5

Educational Achievement

This chapter presents student achievement in HISD on a broad range of indicators. These indicators include the Texas Assessment of Academic Skills (TAAS), the state-developed End-of-Course examinations in Algebra I, Biology, English II, and U.S. History, the Spanish Assessment of Basic Education (SABE), the Stanford 9 and Aprenda 2 achievement tests, and college admissions test (ACT/SAT) performance.

Texas Assessment of Academic Skills

The Texas Assessment of Academic Skills (TAAS) is a criterion-referenced assessment in English and in Spanish to determine the percent of students at the districtwide and individual school level who meet and/or pass the reading, mathematics, writing, social studies, and science criteria established in the Texas Essential Knowledge and Skills (TEKS). In order to graduate from high school, a student must pass the reading, mathematics, and writing subtests on the Exit-level TAAS. If students fail an Exit-level subtest, they continue to take that subtest until they pass. The grade in which students first take the Exit-level TAAS has changed over the course of TAAS administrations. In this digest, only the results for students taking the Exit-level TAAS for the first time are presented.

Initially, TAAS was administered in English in the fall of 1990–91 and 1991–92 to grades 3, 5, 7, 9; to grade 3 in Spanish; and to grade 11 as Exit-level with reading, mathematics, and writing subtests. In Spring 1992–93, TAAS was administered to grades 3, 4, 7, 8 in English; to grade 3 in Spanish; and to grade 10 as Exit-level with reading, mathematics, and writing subtests. Beginning with the 1993–94 administration, the grades tested, subtests taken by each grade, and the semester in which the TAAS was administered has been constant. Each spring students in grades 3–8 and in grade 10 as Exit-level have taken the reading and mathematics subtests, with students in grades 4, 8, and 10 also taking the writing subtest. Though dropped for several years after 1992–93, Spanish versions of TAAS have been administered to grades 3 and 4 since 1996–97, to grades 5 and 6 since 1997–98 in reading and mathematics, and in writing for only grade 4.

Given the changes in the TAAS administration, discussion focuses on the grades currently tested (3–8 and 10 in reading and mathematics and 4, 8, and 10 in writing) for the nine year period of 1993–94 to 2001–02.

From 1990–91 to 1996–97, results reported are the

passing rates for students not in special education who were enrolled in the district as of the preceding fall PEIMS date. From 1997–98 to 2001–02, results reported are the passing rates for all students, special education and non-special education students, who were enrolled in the district as of the preceding fall PEIMS date. The data are reported for the district by student ethnicity (African American, Asian/Pacific Islander, Hispanic, Native American, and White) and by economic status.

Since 1993–94, the percentage of students at all grade levels passing the TAAS reading subtest has steadily increased with a slight downturn in 1998–99, as listed in Table 5.1. However, in 2001–02, the passing rates on the English version for the district ranged from 84.3% for grade 6 to 92.6% for grade 8. This passing rate for grade 8 in 2001–02 was the highest passing rate for TAAS reading across all grade levels since 1993–94.

Among African American and Hispanic students, there was a trend toward closing the difference in the passing rates for the reading subtest at each grade for each ethnic group when compared to overall district results. In Tables 5.2 through 5.6, the passing rates across each ethnic group and in most grade levels in 2001–02 were the highest passing rates since 1993–94.

The percentage of all students passing the mathematics tests has also steadily increased since 1993–94, as listed in Table 5.7. In 2001–02, the passing rates increased in every grade level from the previous year. The lowest passing rate in 2001–02 was for grade 3 students taking the English version of the mathematics test. However, students in each grade level passing the Spanish version in 2001–02 increased by approximately 2 to 9 percentage points from the previous year.

Across all ethnic groups and almost all grade levels, the passing rates for the mathematics TAAS, as shown in Tables 5.7 to 5.12, were the highest in 2001–02 since 1993–94. Especially noteworthy were the Hispanic and African American students passing the mathematics TAAS in 2001–02. For every grade, English and Spanish versions, Hispanic and African American students had higher passing rates than in the previous year.

Not only has the percentage of students passing the writing test increased from 1993–94 to 2001–02; but Table 5.13 shows that for 2001–02, the passing rates for all students were higher, except in grade 4, than previous years. For the first time, over 90.0% of grade 4

students passed the Spanish version, and nearly 90.0% of grade 4 students passed the English version.

The trend toward closing the difference in the passing rates for the writing subtest is again seen among African American students. Especially among African American students in 2001–02, their passing rates (83.9% and 92.6%) in grades 8 and 10 were better than the rates for the same grades across the district as a whole (80.5% and 86.8%). However, in Tables 5.14 to 5.17, the 2001–02 passing rates among each ethnic group did not appear to be the highest passing rates from previous years, unlike the reading and mathematics tests.

Results for economically disadvantaged students, in Table 5.19, mirror the trends discussed for the TAAS subtests. While 1998–99 passing rates declined in the reading tests, passing rates in 2001–02 were highest across all of the grades compared to previous years. Mathematics and writing tests also had the highest passing rates across all of the grades during the 2001–02 school year.

Table 5.20 shows the percent of students passing the TAAS 8th grade science and social studies subtests for the district as a whole and by ethnicity from 1994–95 to 2001–02. The passing rates on the science test across each ethnic group, except for Native American students, were the highest in 2001–02 compared to previous years. The highest passing rates on the science test occurred for White students in 2001–02, reporting 98.3% percent passing. The social studies test had higher passing rates in 2001–02 than in previous years with Asian/Pacific Islanders reporting the highest percent passing at 95.0%.

End-of-Course Examinations

Since 1994–95, the state has administered a series of End-of-Course examinations to ensure that high academic standards are being met in key secondary school courses. Table 5.21 presents the percentage of students not in special education passing the spring administrations of the Algebra I, Biology, English II, and U.S. History exams. The English II and U.S. History exams were first administered in the district during the 1998–99 school year. The data are for the district as a whole, as well as by ethnicity and economic status.

The most prominent trend is the continued difference in performance by all students between Algebra I and Biology from the 1995–96 school year to 2001–02. In 1995–96, the passing rate for the district as a whole was 21% on the Algebra I exam and 62% on the Biology exam, a difference of 41 percentage points. In 2001–02, this difference in performance decreased to 25.5 per-

centage points (for Algebra I, percent passing rate was 46.1%; for Biology, 71.6%).

The 2001–02 results for Algebra I did show continued improvement for the district, since not all ethnic groups and economically disadvantaged students increased their passing rates in the 2001–02 school year when compared to previous years. This was also true for students who were administered the Biology exam in 2001–02.

The English II examination showed lower passing rates in 2001–02 when compared to the previous year. The English II examination for the district decreased by 7.6 percentage points between these two years (from 63.0% to 70.6%). In addition, each ethnic group and the economically disadvantaged students had lower passing rates in 2001–02 than 2000–01. The U.S. History examination results in the district as a whole increased by 2.1 percentage points between 2000–01 and 2001–02 (from 57.7% to 59.8%).

SABE

During the period from 1990–91 to 1995–96, SABE was administered to bilingual students in the district as a Spanish-language assessment instrument, in lieu of the TAAS. With the reintroduction of the Spanish TAAS for grades 3 and 4 in 1994–95, and for grades 5 and 6 in 1995–96, the final administration of SABE was to grade 2 in 1995–96. In the following year, the district decided to use the Aprenda 2 as its norm-referenced measure of achievement among Spanish-speaking students. SABE data are presented for Spanish-speaking students from 1990–91 to 1995–96.

Table 5.22 presents the percentage of students at or above the 50th percentile in reading and mathematics in the years 1990–91 through 1995–96 for first through sixth grades. In 1994–95, the percentage of students at or above 50th percentile in reading was 49% in second grade, 21% in fifth grade, and 15% in sixth grade. In mathematics, the percent at or above 50th percentile in 1994–95 was 47% in second grade, 31% in fifth grade, and 30% in sixth grade. The goal of the bilingual program is to exit those students who demonstrate academic achievement as quickly as possible. Therefore, the scores for upper grades reflect the performance of students who had recently entered the program or who had not reached exit criteria.

Table 5.23 gives the number tested, mean percentile, and mean NCE for SABE reading and mathematics in the years 1990–91 through 1995–96. The number tested increased each of the first four years 1990–91 through 1993–94, (reading = 8,029 to 12,289, mathematics = 8,026 to 12,916). However, the number declined

sharply in 1994–95 and 1995–96 when most third and fourth graders took the Spanish TAAS.

The reading mean percentile was above 50.0, except in 1991–92, for each of the five years the percentiles were reported. The low was in 1991–92 at 49.2; while the peak was in 1993–94 at 56.6. In mathematics, the percentiles were between 56.4, and 65.4 between 1990–91 and 1994–95.

Stanford 9 and Aprenda 2

The Stanford 9 is a national norm-referenced achievement test designed to measure the degree of learning as a result of exposure to specific learning experiences. The Aprenda 2 is a Spanish language instrument also measuring achievement and learning. In 1996, the district decided to include these tests in its student assessment regimen as a complement to TAAS. With only five administrations, the discussion is limited.

Presented in Table 5.24, the 2001–02 results from the Stanford 9, indicate a lower level of achievement from the previous year by students in six of eleven grades in reading, ten of eleven grades in mathematics, and seven of eleven grades in language. These results could perhaps be due to the norming process used by the testing company. Specifically, in the spring of 2002, HISD student performance was compared to the Stanford 9, 2000 norms for the first time. In previous years, Harcourt Brace utilized spring 1995 norms in the calculation of NCEs for HISD students. Harcourt Brace has determined the 2000 norms are slightly more rigorous than the 1995 norms creating a slight decrease in student

performance for the spring of 2002 test administration. This applies for the Aprenda 2 test administered in the spring of 2002.

Results from the Aprenda 2 and Aprenda, presented in Table 5.25, also indicate lower scores in all subjects and all grades, except for grades 4 and 5 reading, for 2001–02 test administration over the previous year. Reading scores decreased in six of nine grades in the spring of 2001–02 from the previous year. In mathematics and language, all grades had lower NCEs from the previous year.

In 2001–02 the Aprenda was administered in place of the Aprenda 2.

College Admissions Testing

The SAT and/or ACT tests are required for admission to nearly all of the country's non-open admission colleges and universities. Several trends emerged in the data for the period from 1989–90 to 2000–01, as shown in Table 5.26. First, the percentage of all students taking either the SAT and/or ACT remained fairly constant. The participation rate for the 2000–01 school year was 62.6% up from 59.0% in the previous year. Second, the largest percentage of students were at or above criterion in 1996–97 (23.1%), when compared to other years. The criterion for SAT was 1000 prior to 1996–97 and changed to 1110 thereafter. Third, mean SAT scores rose from their lowest point of 830 in 1992–93 to their highest point of 940 in 2000–01, a 110 point increase. However, mean ACT scores fluctuated in the 18.6 to 19.5 range for the 1989–90 to 2000–01 academic years. According to TEA and AEIS definitions, the criterion for ACT is 24.

CHAPTER 6

Student Behavior

This chapter focuses on disciplinary actions that occurred at HISD schools. Student misconduct is addressed by school administrators through specific disciplinary actions. The HISD *Code of Student Conduct: Your Rights and Responsibilities* categorizes student acts of misconduct into five levels and delineates the alternatives for schools to address these behaviors. The levels of misconduct as specified in the *Code of Student Conduct* range from the least serious infractions that “can be corrected by the teacher” to the most extreme offenses including illegal acts and chronic misbehavior for which a student can be referred to an alternative education program or expelled.

The disciplinary action categories covered in this report are in-school suspensions, out-of-school suspensions, expulsions, corporal punishment, and referrals to the Houston Police Department. Brief descriptions of these categories are provided below. This information is based on descriptions in the *Code of Student Conduct* except where noted.

In-School Suspensions—Short term assignments to a Student Assignment Center, Student Referral Center, or Discipline Referral Center, may last up to three days. Long term reassessments to an in-school suspension or a disciplinary alternative education program can be made for up to the end of the next grading period or the end of the school year.

Out-of-School Suspensions—Students may be suspended for up to three days pending placement in a disciplinary alternative education program.

Short term in-school suspensions can be used in response to behavior that interferes with the orderliness of the classroom or school. Students receive out-of-school suspensions and long term in-school suspensions if they present a danger of physical harm to themselves or to other individuals or engage in “serious or persistent misbehavior that violates the district’s published standards of conduct.”

Expulsion—Students are removed from school for more than three consecutive days but not longer than one calendar year. This action requires a formal hearing with school administrators. Behaviors justifying expulsion are “serious misbehaviors and/or illegal acts which threaten to impair the educational efficiency of the school, and/or which most seriously disrupt the orderly educational process in the classroom and/or the school.” In accordance with the Board of Education’s zero

tolerance policy, “All students who unlawfully possess a firearm, illegal knife, explosive, or any other dangerous object or weapon ... shall be recommended for expulsion.” Unlike other behaviors justifying expulsion, a weapons violation results in expulsion for a minimum of one school year (two semesters).

Corporal Punishment—Although abolished from board policy, a school may obtain a waiver from the Superintendent of Schools, granting the school permission to use corporal punishment to discipline students. This action is “limited to spanking or paddling the student ... and is limited to a maximum of three ‘pops.’”

Referrals to the Houston Police Department—Local law enforcement agencies are used to protect students and school personnel and facilities “if a disturbance, disorder, or demonstration should occur that is beyond the capacity of the administration to control” (460.710, Administrative Procedures: Board of Education, 1988). A school principal is required by law to notify the school district police department and local police department if there are reasonable grounds for believing that a serious offense has occurred. Such offenses include deadly conduct, a terroristic threat, the use, sale or possession of a controlled substance, possession of a weapon, or any other criminal offense as defined under Section 22.05 of the Penal Code.

Disciplinary Actions by Level, Ethnicity and Gender

Table 6.1 presents the number of student disciplinary actions by academic level from 1991–92 to 2001–02. Disciplinary actions by ethnicity and gender can be found in Table 6.2. Any interpretation of these data should be regarded with caution due to limitations related to the data collection procedures. Specifically, data for the 1993–94 school year were collected in the Fall of 1994. In 1995–96, the district implemented a new system for maintaining student data. As a result, the number of disciplinary actions reported for these two school years may be underestimated.

Beginning with the 1997–98 school year, disciplinary actions were incorporated into PEIMS, as noted in Table 6.1. From 1997–98 to the present, disciplinary actions were recorded in accordance with Chapter 37 (Discipline; Law and Order) of the Texas Education Code. Disciplinary codes reported in the *District and School Profiles* include in-school and out-of-school suspensions, expulsions to juvenile justice and other

alternative education programs (AEPs), and placement in an AEP as directed by Chapter 37. The total number of reported disciplinary actions also includes continuation of another district's AEP placement or expulsion order and "other" actions.

The most frequently reported disciplinary actions across all ten school years were in-school and out-of-school suspensions, as shown in Table 6.1. The highest percentage of students involved in in-school suspensions was 64.9% of all incidents or 17,009 students in 1994–95; whereas, the highest number of students involved in in-school suspensions occurred in 2001–02, with 21,883 students. The lowest number of students involved in in-school suspensions was 13,944, or 41.8% of all actions, in 1996–97. In comparison, students involved in out-of school suspensions were highest in 2001–02 with 20,420 students; whereas the lowest number of students involved in out-of-school suspensions was 13,402 in 1992–93.

The number of expulsions in HISD has vacillated over the last ten years. For example, in 1991–92, the number of students expelled was 742. This number increased to 971 in 1993–94, dropped to 317 in 1995–96, then increased to 867 in 1996–97. There was another sharp decline in the number of expulsions from 1997–98 to 1998–99, from 764 to 286 students. The number of expulsions declined again in 1999–2000 to 207 students, a ten year low. However, in 2000–01 and 2001–02 the number of students expelled increased to 257 and 288 students, respectively.

The number of incidents leading to corporal punishment also fluctuated, decreasing between 1991–92 and 1992–93, and then increasing to a high of 215 in 1994–95. This number declined to 56 in 1995–96, then increased to 157 in 1996–97. There were no data available to report the number of incidents leading to corporal punishment from 1997–98 to 2001–02. With the exception of 1995–96 and 1996–97 school years, referrals to HPD continuously increased. This increase can be attributed in part to changes in the *Code of Student Conduct* in 1994–95 explicitly describing the instances in which principals are required to report an infraction to local law enforcement. There were, however, no data available for referrals to HPD from the 1997–98, to 2001–02 school years.

With respect to academic level, in-school suspensions had the highest frequency among middle school students each year from 1991–92 to 1998–99. The 1999–00 school year was the first year when more in-school suspensions occurred among students at the high school level. Out-of school suspensions have occurred more frequently at the middle school level since 1991–92. Expulsions also occurred more frequently at the middle school level every year since 1991–92, except for 1996–97 and 2000–01 when the majority occurred at the high school level.

Table 6.2 provides number and percentage of students involved in disciplinary actions across ethnicity and gender. In 1991–92, over half of all incidents involved African American students. From 1995–96 to 1996–97 and 1998–99 to 2001–02, over half of all incidents involved Hispanic students. The percentage of all incidents involving students of other ethnic backgrounds has fluctuated but remained below 15% over the last ten years.

The largest proportion of in-school suspensions was associated with Hispanic students since 1993–94, reaching a high of 55.4% of in-school suspensions in 2000–01. A similar trend with Hispanic students was associated with out-of-school suspensions over the same time frame, reaching a high of 52.5% of out-of-school suspensions in 1995–96. The number of expulsions has involved Hispanic students for the majority of incidents from 1991–92 to 2001–02. The only exception was during the 1999–2000 school year, when the number of expulsions involving Hispanic and African American students was the same, each at 48.3% of the total incidents.

For every year that gender has been reported in relation to disciplinary actions, a greater proportion of male students were involved across all types of actions, generally around 65%. Regarding specific disciplinary actions, the largest discrepancies in the proportion of male/female involvement occurred in expulsions, corporal punishment incidents, and referrals to HPD. In the category of corporal punishments in particular, male students were involved in as much as 91.1% of those actions in 1995–96. For expulsions, males were involved in over 80% of those actions since 2000–01.

CHAPTER 7

Program Information

Student enrollment, teacher participation, and instructional expenditures by program for 1990–91 to 2001–02 are presented in Table 7.1. The Bilingual/ESL (English as a Second Language) program each year has the largest enrollment of students, with 54,075 in 2001–02. Since 1990–91, student enrollment in this program increased steadily from 31,895, or 16.4% of the total number of students, to 23.8% in 1999–2000 and 25.7% in 2001–02 of the student population. As the number and percent of students in this program has grown, the number of teachers also increased from 1,637 in 1990–91 to 2,370 in 2001–02. The percentage of Bilingual/ESL teachers ranged between 15.3% in 1990–91, to 9.6% in 1993–94, and 19.6% in 2001–02. Instructional expenditures for the Bilingual/ESL program also increased from \$44 million in 1990–91 to \$126 million in 2001–02.

Another growing program for HISD is Career and Technology Education (CATE). During the 1990–91 school year, there were 19,355 HISD students in the CATE program; 10.0% of the student body. By 2001–02, 36,202 HISD students, 17.2% of the student population, were enrolled in CATE. The number of HISD teachers in the CATE program decreased from 427 teachers in 1990–91 to 361 in 2001–02. While student enrollment in the program was more than doubling, the percentage of instructional expenditures increased 62.5% from \$16 million in 1990–91 to \$26 million in 2001–02.

Special Education has represented approximately 10.0% of the total student enrollment over the past twelve years. Beginning in 1991–92, there was a slow but steady growth in the number and percentage of students enrolled in the Special Education program from 17,768 students in 1991–92 to 22,028 students in 1998–99. However, from the latter year through the

2001–02 school year, student enrollment in the area has declined to 20,706. The number of teachers in the Special Education program has fluctuated over the last twelve years from 1,167 in 1990–91, up to 1,351 in 1998, and ending with 1,317 in 2001–02. Instructional expenditures for the Special Education program increased from \$44 million in 1990–91 to \$113 million in 2001–2002. The instructional expenditures for Special Education have more than doubled over the last twelve years.

The number and percentage of students enrolled in HISD's Gifted and Talented program fluctuated from 1990–91 through 2001–02. During 1990–91, 5.4% of the student population or 10,439 students participated in the program. This number increased in 2001–02 to 19,661 students, or 9.3% of the student population, which almost doubled in size. The number of teachers in the Gifted and Talented program also increased from 456 teachers in 1990–91 to 729 teachers in 2001–02, reflecting a 59.8% increase. During the 1992–93 school year, the number of teachers serving the Gifted and Talented students grew to 691, then dropped to 405 in 1993–94. Instructional expenditures for the Gifted and Talented program have also fluctuated from \$7 million in 1990–91 to \$19 million in 1997–98, then dropped to \$8 million in 2001–02.

Compensatory Education covers a variety of programs and serves at-risk students across several areas and programs. The number of teachers in Compensatory Education fluctuated widely from 541 in 1990–91, to a high of 2,981 in 1993–94, then down to 345 in 1994–95, 92 in 2000–01, and 129 in 2001–02. Instructional expenditures for the program more than doubled from \$45 million in 1990–91 to \$99 million in 1995–96. From 1996–97 to 2001–02 expenditures fluctuated from \$66 million to \$57 million, respectively.

CHAPTER 8

Revenues and Expenditures

Tables 8.1 through 8.3 provide information on HISD's revenues, expenditures, and taxes from 1990–91 to the 2001–02 school year. In general, both district revenues (except for 1996–97) and expenditures have increased steadily over the last twelve years. Table 8.1 summarizes district revenues and expenditures. Table 8.2 provides expenditures per pupil. Table 8.3 presents various tax information such as tax rates and values from 1990–91 to 2001–02.

Revenues

Between 1990–91 and 1995–96, total budgeted revenues increased 48% from \$743 million to \$1.1 billion. Since 1990–91, revenues increased 88% to \$1.4 billion in 2001–02 with a reported decline to \$981 million in 1996–97. Over the same period, total budgeted revenues per pupil increased from \$3,827 in 1990–91 to \$6,768 in 2001–02. Over the last twelve years the total budgeted revenues per pupil increased by 76.8%.

Funding Sources

The major source of district funding is through local taxes, with 71.1% of the 2001–02 revenues coming from local taxes, as shown in Table 8.1. In 1990–91 local taxes provided 54.9% of the district revenues. When TEA began to report the dollar amount in 1993–94, local taxes provided approximately \$609 million, and increased to \$1.0 billion in 2001–02.

The next largest sources of revenue are through state and federal funds. State funds provided 21.0% of district revenues for the 2001–02 school year. In 2001–02 this amount was approximately \$299 million dollars. In 1990–91, the state provided 31.3% of district revenues. For the 1990–91 school year, federal revenues comprised 10.0% of the total district revenues. This amount dropped to 4.4%, or \$63 million dollars, in 2001–02.

Other local and intermediate funds provide the least amount of revenues to HISD. In 1990–91, 3.8% of the total district revenues came from this source. While this percentage fluctuated over the last twelve years, in the 2001–02 school year the district received approximately \$50 million, or 3.5% of the total revenues.

Expenditures

The percentages of expenditures, listed in Table

8.1, allotted to various functions and objects, have steadily increased over the last twelve years, with the exception of the 1996–97 school year. The largest percentage of operating expenditures by function goes to instruction with 52.3% in 1990–91 and 56.4% in 2001–02. Instructional leadership (instructional administration), however, has represented the least amount of operating expenses with 2.7% in 1990–91 and 1.3% in 2001–02. School leadership (campus administration) has increased from 6.0% in 1990–91 to 6.7% in 2001–02. Central administration dropped from 4.8% in 1990–91 to 3.0% in 2001–02. Of the expenditures listed by object, payroll has declined from 80.5% in 1990–91 to 71.8% in 2001–02.

Per Pupil Expenditures

Table 8.2 summarizes the district's per pupil expenditures over the last twelve years. Of the total per pupil expenditures, there has been an overall increase from \$3,969 in 1990–91 to \$7,589 in 2001–02, representing a 91.2% increase. Of the operating expenditures per pupil, the greatest increase occurred in school leadership with a 60.5% increase from 1993–94 to 2001–02. In instruction and Instructional leadership operating expenditures, the per pupil amount increased 89.7% between 1990–91 to 2001–02.

Tax Information

The total adopted tax rate for the 1990–91 school year was \$1.000. Table 8.3 shows this rate increased to \$1.050 in 1991–92, then \$1.384 in 1992–93. It was not until 1998–99 when the adopted tax rate increased again to \$1.459. In 2001–2002 the total adopted tax rate is \$1.580. The total standardized tax rate was \$0.918 in 1990–91, increased to \$1.353 in 1994–95, dropped to \$1.293 in 1995–95, increased again to \$1.459 in 1998–99, dropped to \$1.373 in 1999–2000 and finally raised to \$1.580 in 2001–02. The standardized local tax base has risen each year except in 1993–94 and 1995–96. This amount was \$47 billion in 1990–91 and \$66 billion in 2001–02. The standardized local tax base value per pupil has also fluctuated from \$242,337 in 1990–91, to \$259,971 in 1992–93, to \$218,539 in 1996–97, to \$253,134 in 1999–2000, and then to \$313,871 in 2001–02.

Contributions to the Tax Base

Most of the property tax base consisted of business and residential holdings, as listed in Table 8.3. For

2001–02 business holdings represented 43.8% of the property tax base, 53.0% were residential, 2.4% were

land, 0.0% were oil and gas, and 0.7% were listed as other holdings.

Harris County and Major Urban School Districts

Chapter 9 provides a variety of information that permit comparison of the Houston Independent School District (HISD) with both Harris County districts in Region IV and other major urban school districts in Texas. To a great extent, these data mirror the topics presented in previous chapters, including enrollment, student and teacher characteristics, academic performance, and financial status. Similar to previous chapters, the data are longitudinal in nature, and the majority of tables span ten school years.

Enrollment

Table 9.1 presents enrollment data from 1990–91 to 2000–01. During this period, HISD enrollment increased from 194,208 students to 208,716 students. Enrollment in other Harris County districts and the major urban school districts also reflected a steady, upward trend over the last ten years. Houston has remained the largest school district, Dallas the second, and Fort Worth the third, in terms of student enrollment. However, Northside has increased in total student enrollment over the last two years and is larger than San Antonio, which has decreased over the last two years.

Student demographics from 1990–91 through 2000–01 are found in Table 9.2. Two trends in the ethnic composition of schools in HISD, other Harris County districts, and the major urban school districts are notable. First, the enrollment of Hispanic students increased more than other students across all districts from 1990–91 to 2000–01. Second, the percentage of White students in virtually all of the school districts has steadily declined from 1990–91 to 2000–01. In addition, the percentage of economically disadvantaged students in all of the Harris County districts has risen steadily from 1991–92 to 2000–01.

Student Achievement

Program enrollment data are presented in Table 9.3. The percentages of students enrolled in various educational programs have remained relatively stable across all of the districts from 1990–91 to 2000–01. Enrollment in Bilingual/ESL programs rose more than most of the other programs for many of the districts, a reflection of the demographic trends noted earlier.

Academic performance—as measured by the Texas Assessment of Academic Skills (TAAS) test—data for 1991–92 through 2000–01 are provided in Table 9.4. The TAAS data reflect general improvements over

time across all districts. In 1991–92, 43.8% of HISD students passed all TAAS subtests; while in 2000–01, 75.3% of students passed all tests. In the Dallas school district, 41.9% of students passed all tests in 1991–92; while 65.2% passed in 2000–01. Across all school districts, mathematics scores increased the greatest from the 1994–95 school year to the 2000–01 school year.

Table 9.5 provides TAAS performance disaggregated by ethnicity and economic status. Most notable are the percentages of African American and Hispanic student groups' passing rates going from below 50% for most of the school districts in 1991–92, to 60% or greater for all of the school districts in 2000–01. The percentages of economically disadvantaged students across most of the districts have almost doubled between 1992–93 and 2000–01.

Table 9.6 contains dropout data for years 1989–90 through 2000–01. The HISD dropout rate has declined steadily overtime, from 10.3 in 1989–90 to 1.5 in 2000–01. During 2000–01, declines occurred across the majority of the Harris County and major urban districts. In Harris County, the highest rate occurred in North Forest, 2.5. Ft. Worth had the highest rate, 2.5, among the major urban school districts.

Data reflecting the number of high school graduates, advanced seals, and Recommended High School or Distinguished Achievement Program codes for the graduating classes of 1990 through 2001 are found in Table 9.7. The number of HISD graduates who met the requirements of the recommended High School Program Distinguished Achievement Award from the Class of 2001 was 4,476.

Table 9.8 provides SAT/ACT performance data, including percentage of students tested, the percent above criterion, the SAT mean total score, and the ACT mean total score. The percentages of students in HISD taking the SAT/ACT exam remained stable, ranging from 61.5% of students graduating from the Class of 1991 to 59.0% of students graduating from the Class of 2000. Over the last nine years, the percent of students tested also remained stable among the major urban school districts. In terms of performance, Austin increased from 24.0% of their students scoring above criterion from the Class of 1991 to 41.2% for the Class of 2000. Corpus Christi went from 13.4% to 24.0%; while Houston went from 14.7% to 21.7% between these two graduating classes.

Harris County school districts compared favorably with students from other major urban districts in terms of SAT and ACT mean scores. However, among Harris County districts, only three had mean SAT scores lower than HISD's average of 929. HISD's mean ACT composite of 19 was lower than all but five Region IV districts and two major urban districts.

Staffing and Programs

The number of instructional and support staff are found in Table 9.9. The total number of Full-Time Equivalent (FTE) staff members and FTE teachers employed by HISD had risen steadily from 1990–91 to 1996–97, when the number of FTE teachers began to decline. There were more FTE teachers in 1995–96 than in 2000–01. Similar fluctuations are also evident among the major urban school districts.

In Table 9.10, percentages by staff positions over the last eleven years are presented. Approximately one-half of FTE positions were filled by teachers each year over this time frame among all of the school districts. In addition, auxiliary staff filled approximately one-quarter to one-third of FTE positions.

Table 9.11 describes average salaries for various FTE positions from 1990–91 through 2000–01. The average teacher salaries in HISD rose from \$28,021 in 1990–91 to \$41,518 in 2000–01, an increase of 48.2%. Average teacher salaries in San Antonio increased 53.1%; while Ysleta increased 48.4% over the last eleven years. Teacher salaries in HISD have remained competitive with other Harris County districts, as well as other major urban districts. In fact, during the 2000–01 school year, teachers in the HISD system were the second-highest paid among major urban school districts.

Table 9.12 provides data reflecting both teacher salaries and average years of experience. The average years of teaching experience among HISD teachers have remained relatively stable from 1995–96 to 2000–01. This stability was also evident among the other Harris County districts and the major urban school districts over the last ten years.

Teacher ethnicity data are presented in Table 9.13. The ethnic composition of HISD teachers has not reflected the changing demographics of the student population from 1990–91 through 2000–01. There has been a slight upward trend in the number of Hispanic faculty employed by the district; however, the vast majority of teachers were identified as either African American or White. HISD has one of the lowest percentages of Hispanic teachers and the highest per-

centages of African American teachers among major urban school districts. Within the Harris County districts, HISD had the highest percentage of Hispanic teachers.

Table 9.14 contains data pertaining to the percentage allocation of teachers across program areas. Between 1990–91 and 2000–01, there has been little variation in the percentage of teachers assigned to various programs in HISD. There was a slight trend towards more teachers in Bilingual/ESL programs across all districts, which parallels the changing enrollment within the district. In 2000–01, HISD allocated 17% of their teachers to Bilingual/ESL programs. Spring Branch allocated 19%. Fort Worth allocated 28%; while Dallas allocated 18% within the major urban school districts.

Tax Information and Expenditures

Tax information for Harris County and the major urban school districts from 1990–91 through 2000–01 is presented in Table 9.15. The taxable value per pupil in HISD declined from \$242,338 in 1990–91 to \$218,539 in 1996–97, and increased to \$289,682 in 2000–01. The equalized total tax rate rose approximately one half a percent across all major school districts over the last ten years. State aid per pupil has decreased in all of the major urban school districts, except for Northside and Ysleta, between 1990–91 and 1998–99.

Table 9.16 provides revenue budget information for the years 1990–91 through 2000–01. Total revenues in HISD have grown from \$743 million in 1990–91 to \$1,360 million in 2000–01. Other Harris County districts and major urban districts have also evidenced substantial growth in total revenues. The primary source of revenues in HISD was local taxation, which accounted for 68% of revenues in 2000–01. Federal monies provided the smallest contribution to overall revenues (4%).

Financial data related to expenditures for 1990–91 through 2000–01 are provided in Table 9.17. Commensurate with increased revenue, total expenditures in HISD, as well as most of the other school districts, have increased over the last eleven years. In 1990–91, total expenditures in HISD were \$771 million, compared with \$1,480 million in 2000–01. Total operating expenditures increased from \$728 million in 1990–91 to \$1,338 million in 2000–01.

Table 9.18 contains expenditure by function data for the 1990–91 through 2000–01. Beginning with 1999–2000, TEA reported non-operating expenditures by object. The majority of expenditures across both Harris County and major urban school districts were related to

instruction. Central administration costs accounted for the smallest portion of budget dollars in 1999-2000 with less than 6% typically across all districts.

Total instructional expenditures and total instructional expenditures by pupil data are provided in Table 9.19. In 1990-91, HISD instructional expenditures totaled \$403 million; while in 2000-01 instructional expenditures accounted for \$762 million of the budget. Per pupil expenditures increased from \$2,075 in 1990-91 to \$3,659 in 2000-2001. Per pupil expenditures across all districts during 2000-01 ranged from \$2,740 to \$4,070.

Percentages of instructional expenditures by program data is found in Table 9.20. Over the last ten years and across all Harris County districts and the major urban school districts, the majority of instructional funds supported the Regular Education program. Percentage expenditures for the Bilingual/ESL and Special Education programs increased across most districts over the ten year span; while percentage expenditures for the Compensatory, Career and Technology, and Gifted and Talented Education programs remained relatively stable.
