

# Program Highlights

## Project Based Learning

Projects are the core of learning at Energy. All teachers practice innovatively by planning large content merged projects that include contemporary engineering challenges, hands on experiences and collaboration.

## Culture of Exhibition

Students showcase their learning including prototypes they have fabricated using laser cutters, 3D printers, and other fabrication tools to the community. Professionals from the workforce attend to evaluate student products and give feedback,

## Industry Partners

Our partners will provide real world project connections, relevant field experiences, industry certification opportunities, and internships. Our partners will regularly engage through judging panels, in consultant roles on projects, and serve as learning mentors for students.
