<tr>
<td>Head Lice (Pediculosis)</td>
<td>Direct contact with an infected person, body fluid, or contaminated objects</td>
<td>Usually 10-14 days (range 3-21 days)</td>
<td>-Mild itching and irritation on the scalp -Blisters on skin (commonly hands and face) which open and not flick off the hair shaft -Itching and scratching of scalp -Infected persons might not have symptoms but can spread the disease to others</td>
<td>No, unless blisters and/ or lesions are not blister-like</td>
<td>Not applicable</td>
<td>Not applicable</td>
<td>Teach effective handwashing</td>
</tr>
<tr>
<td>HIV/AIDS</td>
<td>Direct contact with body fluids during high-risk situations</td>
<td>Usually 1-2 weeks (range 1-3 months)</td>
<td>-Fever and rash can appear first on head and then spread to rest of body -Common cold symptoms such as cough, runny nose, fatigue, headaches, and body aches -Disease in vaccinated children can be mild or absent of fever</td>
<td>Yes</td>
<td>Not applicable</td>
<td>Not applicable</td>
<td>Teach effective handwashing</td>
</tr>
<tr>
<td>Giardiasis</td>
<td>Drinking contaminated water</td>
<td>Range 1-3 days (usually 3-5 days)</td>
<td>-Fever or chills, cough, shortness of breath or difficulty breathing, sore throat, malaise, muscle pain, new-onset cough, fever, diarrhea, nausea, vomiting, rash, abdominal pain, cramping, watery diarrhea, dehydration;</td>
<td>No</td>
<td>Not applicable</td>
<td>Not applicable</td>
<td>Teach effective handwashing</td>
</tr>
<tr>
<td>Varicella (Chickenpox)</td>
<td>Direct contact with respiratory secretions from an infected person</td>
<td>Usually 2 days (range 3-12 days)</td>
<td>-Blistering skin rash -Sudden onset of high fever and headache -A blotchy red rash, which usually begins on the face, appears between the third and seventh day -Vomiting, stiff neck, and photophobia -Skin blisters often open and do not flick off the hair shaft -Children can suffer severe complications in addition to varicella resulting in varicella pneumonia, encephalitis, and/or varicella meningitis</td>
<td>No</td>
<td>Not applicable</td>
<td>Not applicable</td>
<td>Teach effective handwashing</td>
</tr>
<tr>
<td>Measles</td>
<td>Direct contact with respiratory secretions from an infected person</td>
<td>Usually 7-18 days (range 5-12 days)</td>
<td>-Fever -Red eyes, usually with some discharge or crusting around eyes -Runny nose, watery eyes, fatigue, coughing, and sneezing -Disease in vaccinated children can be mild or absent of fever</td>
<td>Yes</td>
<td>Not applicable</td>
<td>Not applicable</td>
<td>Teach effective handwashing</td>
</tr>
<tr>
<td>Mumps</td>
<td>Direct contact with respiratory secretions from an infected person</td>
<td>Usually 16 days (range 14-21 days)</td>
<td>-Fever -Red eyes -Pain or swelling of the parotid glands -Swelling of the cheek and neck -Mouth pain, fever, and headache</td>
<td>No</td>
<td>Not applicable</td>
<td>Not applicable</td>
<td>Teach effective handwashing</td>
</tr>
<tr>
<td>Echoviruses</td>
<td>Direct contact with respiratory secretions from an infected person</td>
<td>Usually 14 days (range 10-21 days)</td>
<td>-Fever -Vomiting -Stiff neck -Photophobia -Chills and fever, muscle pain, headache, and mild respiratory illness</td>
<td>No</td>
<td>No</td>
<td>Not applicable</td>
<td>Teach effective handwashing</td>
</tr>
<tr>
<td>Cellulitis (Staphylococcal, Streptococcal)</td>
<td>Direct contact with respiratory secretions from an infected person</td>
<td>Usually 1-5 days</td>
<td>-Fever -Chills -Headache -Muscle aches -fatigue, muscle or body aches, headache, new loss of taste or smell, new fever, congestion, severe vomit, nausea, or vomiting, diarrhea</td>
<td>Yes</td>
<td>Not applicable</td>
<td>Not applicable</td>
<td>Teach effective handwashing</td>
</tr>
<tr>
<td>Scarlet Fever (Scarlatina)</td>
<td>Direct contact with respiratory secretions from an infected person</td>
<td>Usually 1-5 days</td>
<td>-Fever -Chills -Headache -Muscle aches -fatigue, muscle or body aches, headache, new loss of taste or smell, new fever, congestion, severe vomit, nausea, or vomiting, diarrhea</td>
<td>Yes</td>
<td>Not applicable</td>
<td>Not applicable</td>

</table>
10 Day 0 is the day the student took the positive viral test. Day 1 is the first full day after the test was performed. Isolation can end after 5 full days.

Shingles
Salmonellosis
Rubella
Pinworms
Otitis Media (Earache)

4. investigation/conditions/contacts.

An up-to-date list of Texas reportable conditions and reporting forms can be obtained at http://www.dshs.state.tx.us/idcu/investigation/conditions/.

Outbreak/epidemic: The occurrence in a community or region of a group of illnesses of similar nature, clearly in excess of normal expectancy, and derived from a common or a series of events.

Washhands with soap and water long enough to sing the “Happy Birthday” song twice.

Lyme disease is transmitted by the bite of an infected deer tick. Lyme disease is rare in Texas.

Pregnant women should avoid contact with individuals suspected of having chickenpox, cytomegalovirus, fifth disease, influenza, measles and rubella.

Observe the appearance and behavior of exposed children and be alert to the onset of disease.

Separate the ill child from well children at the facility until the ill child can be taken home.

• Area of skin, usually on one side of the face or body, has an orange-red rash.

• Fever, abdominal pain, diarrhea

• Fever, coughing

• Margins can be reddish and slightly raised

• Slowly spreading, flat, scaly, ring-shaped lesions on skin

Isolation: ten days after onset

Rubella

Feeding artificially: breast or bottle feeding

Separate the ill child from well children at the facility until the ill child can be taken home.
