

Cycle 1		29 Days Aug. 22-Sept. 30, 2022	<i>The recommended number of class periods is less than the number of days in the grading cycle to accommodate differentiated instruction, extended learning time, and assessment days. Complete instructional planning information and support are in the HISD Curriculum documents.</i>
Unit	# Class Periods	Texas Essential Knowledge and Skills/Student Expectations (TEKS/SEs) The student will:	
Unit 1: Measuring and Describing Motion The focus of this unit is on measurement and quantitative observations, including tables, charts, graphs, and equations used, describing the motion of objects.	4 class periods (90-min. each) or 8 class periods (45-min. each) <i>Teachers Report to</i> <i>Campuses</i> <i>Aug. 8</i> <i>Teacher Service Days</i> <i>Aug. 8-12,</i> <i>Aug. 16-19</i> <i>Teacher Prep Day (no students)</i> <i>Aug. 15</i> <i>Labor Day</i> <i>Sept. 5</i>	Science process standards are embedded into lessons on science content throughout the entire year. Science Content Standards: Ⓡ PHYS.4A Generate and interpret graphs and charts describing different types of motion including investigations using real-time technology such as motion detectors or photogates. Science Process Standards: Ⓢ PHYS.1A Demonstrate safe practices during laboratory and field investigations Ⓢ PHYS.1B Demonstrate an understanding of the use and conservation of resources and the proper disposal or recycling of materials. Ⓢ PHYS.2D Design and implement investigative procedures including making observations, asking well-defined questions, formulating testable hypotheses, identifying variables, selecting appropriate equipment and technology, and evaluating numerical answers for reasonableness, and identifying causes and effects of uncertainties in measured data. Ⓢ PHYS.2E Demonstrate the use of course apparatus, equipment, techniques, and procedures, including multimeters (current, voltage, resistance), balance, batteries, dynamic demonstration equipment, collision, apparatus, lab masses, magnets, plane mirrors, convex lenses, stopwatches, trajectory apparatus, graph papers, magnetic compasses, protractors, metric rulers, spring scales, thermometer, slinky springs, and/or other equipment and materials that will produce the same results. Ⓢ PHYS.2F Use a wide variety of additional course apparatuses, equipment, techniques, materials, and procedures as appropriate such as ripple tank with wave generator, wave motion rope, tuning forks, hand-held spectrosopes, discharge tubes with power supply (H, He, Ne, Ar), electromagnetic spectrum charts, laser pointers, micrometers, caliper, computer, data acquisition probes, scientific calculators, graphing technology, electrostatic kit, electroscopes, inclined plane, optics bench, optics kit, polarized fil, prisms, pulley with table clamp, motion detectors, photogates, friction blocks, ballistic carts, or equivalent, resonance tube, stroboscope, resistors, copper wire, switches, iron filings, and/or other equipment and materials that will produce the same results. Ⓢ PHYS.2G Make measurements with accuracy and precision and record data using scientific notation and International System (SI) units. Ⓢ PHYS.2H Organize, evaluate, and make inferences from data including the use of tables, charts, and graphs. Ⓢ PHYS.2I Communicate valid conclusions supported by the data through various methods such as lab reports, labeled drawings, graphic organizers, journals, summaries, oral reports, and technology-based reports.	

Cycle 1		29 Days Aug. 22-Sept. 30, 2022	<i>The recommended number of class periods is less than the number of days in the grading cycle to accommodate differentiated instruction, extended learning time, and assessment days. Complete instructional planning information and support are in the HISD Curriculum documents.</i>
Unit	# Class Periods	Texas Essential Knowledge and Skills/Student Expectations (TEKS/SEs) The student will:	
		<p>Ⓟ PHYS.2J Express relationships among physical variables quantitatively including the use of graphs, charts, and equations.</p> <p>Ⓟ PHYS.3A Analyze, evaluate, and critique scientific explanations by using empirical evidence, logical reasoning, and experimental and observational testing</p> <p>Ⓟ PHYS.3B Communicate and apply scientific information extracted from various sources such as current events, news reports, published journal articles, and marketing materials.</p> <p>Ⓟ PHYS.3E Express, manipulate, and interpret relationships symbolically in accordance with accepted theories to make predictions and solve problems mathematically.</p>	
<p>Unit 2: Motion in One Dimension Students uses kinematic equations and graphical vector addition to describe motion in one dimension including speed, velocity, distance, displacement, frame of reference, and acceleration.</p>	<p>4 class periods (90-min. each) or 8 class periods (45-min. each)</p>	<p>Science Content Standards:</p> <p>Ⓡ PHYS.4B Describe and analyze motion in one dimension using equations and graphical vector addition with the concepts of distance, displacement, speed, average velocity, instantaneous velocity, frame of reference, and acceleration.</p> <p>Science Process Standards:</p> <p>Ⓟ PHYS.2G Make measurements with accuracy and precision and record data using scientific notation and International System (SI) units.</p> <p>Ⓟ PHYS.2H Organize and evaluate data and make inferences from data including the use of tables, charts, and graphs.</p> <p>Ⓟ PHYS.2J Express and manipulate relationships among physical variables quantitatively including the use of graphs, charts, and equations.</p> <p>Ⓟ PHYS.3A Analyze, evaluate, and critique scientific explanations by using empirical evidence, logical reasoning, and experimental and observational testing</p> <p>Ⓟ PHYS.3B Communicate and apply scientific information extracted from various sources such as current events, news reports, published journal articles, and marketing materials.</p> <p>Ⓟ PHYS.3E Express, manipulate, and interpret relationships symbolically in accordance with accepted theories to make predictions and solve problems mathematically.</p>	
<p>Unit 3: Gravitational Force Students are introduced to the four fundamental forces in physics. The rest of this unit focuses on the principles and calculations of gravitational force.</p>	<p>4 class periods (90-min. each) or 8 class periods (45-min. each)</p>	<p>Science Content Standards:</p> <p>Ⓢ PHYS.5A Describe the concepts of gravitational, electromagnetic, weak nuclear, and strong nuclear forces.</p> <p>Ⓡ PHYS.5B Describe and calculate how the magnitude of the gravitational force between two objects depends on their masses and the distance between their centers.</p> <p>Science Process Standards:</p> <p>Ⓟ PHY.2A Know the definition of science.</p>	

Cycle 1		29 Days
		Aug. 22-Sept. 30, 2022
Unit	# Class Periods	Texas Essential Knowledge and Skills/Student Expectations (TEKS/SEs) The student will:
		<p>Ⓟ PHYS.2B Know that scientific hypotheses are tentative and testable statements that must be capable of being supported or not supported by observational evidence.</p> <p>Ⓟ PHYS.2C Know that scientific theories are based on natural and physical phenomena and are capable of being tested by multiple independent researchers. Unlike hypotheses, scientific theories are well-established and highly reliable explanations but may be subject to change.</p> <p>Ⓟ PHYS.2H Organize and evaluate data and make inferences from data including the use of tables, charts, and graphs.</p> <p>Ⓟ PHYS.2J Express relationships among physical variables quantitatively including the use of graphs, charts, and equations.</p> <p>Ⓟ PHYS.3C Explain the impacts of the scientific contributions of a variety of historical and contemporary scientists on scientific thought and society.</p> <p>Ⓟ PHYS.3E Express, manipulate, and interpret relationships symbolically in accordance with accepted theories to make predictions and solve problems mathematically.</p>

The recommended number of class periods is less than the number of days in the grading cycle to accommodate differentiated instruction, extended learning time, and assessment days. Complete instructional planning information and support are in the HISD Curriculum documents.

# Class Periods		The student will:
<p>on their electric properties. Students also investigate, construct, and analyze series and parallel circuits using calculations for potential difference, resistance, and power used by electric circuit elements in both series and parallel combinations.</p>		<p>Science Process Standards:</p> <p>Ⓢ PHYS.2D Design and implement investigative procedures including making observations, asking well-defined questions, formulating testable hypotheses, identifying variables, selecting appropriate equipment and technology, and evaluating numerical answers for reasonableness, and identifying causes and effects of uncertainties in measured data.</p> <p>Ⓢ PHYS.2E Demonstrate the use of course apparatus, equipment, techniques, and procedures, including multimeters (current, voltage, resistance), balance, batteries, dynamic demonstration equipment, collision, apparatus, lab masses, magnets, plane mirrors, convex lenses, stopwatches, trajectory apparatus, graph papers, magnetic compasses, protractors, metric rulers, spring scales, thermometer, slinky springs, and/or other equipment and materials that will produce the same results.</p> <p>Ⓢ PHYS.2F Use a wide variety of additional course apparatuses, equipment, techniques, materials, and procedures as appropriate such as ripple tank with wave generator, wave motion rope, tuning forks, hand-held spectrometers, discharge tubes with power supply (H, He, Ne, Ar), electromagnetic spectrum charts, laser pointers, micrometers, caliper, computer, data acquisition probes, scientific calculators, graphing technology, electrostatic kit, electroscope, inclined plane, optics bench, optics kit, polarized fil, prisms, pulley with table clamp, motion detectors, photogates, friction blocks, ballistic carts, or equivalent, resonance tube, stroboscope, resistors, copper wire, switches, iron filings, and/or other equipment and materials that will produce the same results.</p> <p>Ⓢ PHYS.2G Make measurements with accuracy and precision and record data using scientific notation and International System (SI) units.</p> <p>Ⓢ PHYS.2H Organize and evaluate data and make inferences from data including the use of tables, charts, and graphs.</p> <p>Ⓢ PHYS.2I Communicate valid conclusions supported by the data through various methods such as lab reports, labeled drawings, graphic organizers, journals, summaries, oral reports, and technology-based reports.</p> <p>Ⓢ PHYS.2J Express relationships among physical variables quantitatively including the use of graphs, charts, and equations.</p> <p>Ⓢ PHYS.3E Express and interpret relationships symbolically in accordance with accepted theories to make predictions and solve problems mathematically.</p>

Cycle 5	28 Days	<i>The recommended number of class periods is less than the number of days in the grading cycle to accommodate differentiated instruction, extended learning time, and assessment days. Complete instructional planning information and support are in the HISD Curriculum documents.</i>
	Feb. 27 - Apr. 14, 2023	
Unit	# Class Periods	Texas Essential Knowledge and Skills/Student Expectations (TEKS/SEs) The student will:

Cycle 6		31 Days
Apr. 17 - May 31, 2023		<i>The recommended number of class periods is less than the number of days in the grading cycle to accommodate differentiated instruction, extended learning time, and assessment days. Complete instructional planning information and support are in the HISD Curriculum documents.</i>
Unit	# Class Periods	Texas Essential Knowledge and Skills/Student Expectations (TEKS/SEs) The student will:
Unit 15 Photoelectric Effect and Atomic Physics Students investigate atomic and quantum phenomena including the dual nature of light. Calculate and describe the application of mass-energy equivalence.	7 class periods (90-min. each) or 14 class periods (45-min. each) <i>Memorial Day</i> <i>May 29</i> <i>Teacher Prep Day</i> <i>(no students)</i> <i>June 1</i>	Science Content Standards: Ⓡ PHYS.8A Describe the photoelectric effect and the dual nature of light. Ⓢ PHYS.8B Compare and explain the emission spectra produced by various atoms. Ⓢ PHYS.8C Calculate and describe the applications of mass-energy equivalence. Science Process Standards: Ⓢ PHYS.2H Organize and evaluate data and make inferences from data including the use of tables, charts, and graphs. Ⓢ PHYS.2J Express relationships among physical variables quantitatively including the use of graphs, charts, and equations. Ⓢ PHYS.3A Analyze, evaluate, and critique scientific explanations by using empirical evidence, logical reasoning, and experimental and observational testing Ⓢ PHYS.3B Communicate and apply scientific information extracted from various sources such as current events, news reports, published journal articles, and marketing materials. Ⓢ PHYS.3C Explain the impacts of the scientific contributions of a variety of historical and contemporary scientists on scientific thought and society.
Unit 16 Applications of Atomic and Nuclear Physics Students investigate examples of atomic, nuclear, and quantum phenomena in everyday applications.	3 class periods (90-min. each) or 6 class periods (45-min. each)	Science Content Standards: Ⓢ PHYS.8D Give examples of applications of atomic and nuclear phenomena using the standard model such as nuclear stability, fission and fusion, radiation therapy, diagnostic imaging, semiconductors, superconductors, solar cells, and nuclear power, and examples of applications of quantum phenomena. Science Process Standards: Ⓢ PHYS.2J Express relationships among physical variables quantitatively including the use of graphs, charts, and equations. Ⓢ PHYS.3B Communicate and apply scientific information extracted from various sources such as current events, news reports, published journal articles, and marketing materials. Ⓢ PHYS.3C Explain the impacts of the scientific contributions of a variety of historical and contemporary scientists on scientific thought and society. Ⓢ PHYS.3D Research and describe the connections between physics and future careers. Ⓢ PHYS.3E Express and interpret relationships symbolically in accordance with accepted theories to make predictions and solve problems mathematically.
Unit 17: STEM Project/	3 class periods (90-min. each) or	Science Content Standards: (Suggested Spiraling TEKS for STEM/PBL Projects)

Cycle 6		31 Days Apr. 17 - May 31, 2023	<i>The recommended number of class periods is less than the number of days in the grading cycle to accommodate differentiated instruction, extended learning time, and assessment days. Complete instructional planning information and support are in the HISD Curriculum documents.</i>
Unit	# Class Periods	Texas Essential Knowledge and Skills/Student Expectations (TEKS/SEs) The student will:	
Individual Research After the End-of-Course exams, students plan and implement scientific investigations through real-life applications of current science issues.	6 class periods (45-min. each)	<p> Ⓡ PHYS.4A Generate and interpret graphs and charts describing different types of motion including investigations using real-time technology such as motion detectors or photogates. </p> <p> Ⓡ PHYS.4B Describe and analyze motion in one dimension using equations and graphical vector addition with the concepts of distance, displacement, speed, average velocity, instantaneous velocity, frame of reference, and acceleration. </p> <p> Ⓡ PHYS.4D Calculate the effect of forces on objects, including the law of inertia, the relationship between force and acceleration, and the nature of force pairs between objects using methods including free-body force diagrams. </p> <p> Ⓢ PHYS.4C Analyze and describe accelerated motion in two dimensions, including using equations, graphical vector addition, and projectile and circular examples. </p> <p> Ⓢ PHYS.5D Identify and describe examples of electric and magnetic forces and fields in everyday life such as generators, motors, and transformers. </p> <p> Ⓡ PHYS.5F Investigate and calculate the current through, the potential difference across, resistance of, and power used by electric circuit elements connected in both series and parallel combinations. </p> <p> Ⓡ PHYS.6D Demonstrate and apply the laws of conservation of energy and conservation of momentum in one dimension. </p> <p> Ⓢ PHYS.6E Explain everyday examples that illustrate the four laws of thermodynamics and the processes of thermal energy transfer. </p> <p> Ⓢ PHYS.7C Compare characteristics and behaviors of transverse waves including electromagnetic waves and the electromagnetic spectrum and characteristics and behaviors of longitudinal waves including sound waves. </p> <p> Ⓡ PHYS.7D Investigate behaviors of waves including reflection, refraction, diffraction, interference, resonance, and the Doppler effect. </p> <p> Ⓢ PHYS.8D Give examples of applications of atomic and nuclear phenomena using the standard model such as nuclear stability, fission and fusion, radiation therapy, diagnostic imaging, semiconductors, superconductors, solar cells, and nuclear power, and examples of applications of quantum phenomena. </p> <p> Science Process Standards: </p> <p> Ⓢ PHYS.1A Demonstrate safe practices during laboratory and field investigations. </p> <p> Ⓢ PHYS.1B Demonstrate an understanding of the use and conservation of resources and the proper disposal or recycling of materials. </p> <p> Ⓢ PHYS.2A Know the definition of science. </p> <p> Ⓢ PHYS.2B Know that scientific hypotheses are tentative and testable statements that must be capable of being supported or not supported by observational evidence. </p> <p> Ⓢ PHYS.2D Design and implement investigative procedures including making observations, asking well-defined questions, formulating testable hypotheses, </p>	

Cycle 6		31 Days
		Apr. 17 - May 31, 2023
<i>The recommended number of class periods is less than the number of days in the grading cycle to accommodate differentiated instruction, extended learning time, and assessment days. Complete instructional planning information and support are in the HISD Curriculum documents.</i>
